Engineered and Made in Germany

The specialist for valve actuation

PS Automation GmbH was founded in Bad Dürkheim in 1989.

ers, suppliers and other stakeholders.

PS Automation GmbH is an independent company. Thus, we create value through close relations with custo-

Our management looks back on more than 40 years of experience in its business.

In order to keep up with competition in the process technology of water, power, chemical and pharmaceutical industries, industrial utilities and ship

building, process plants must run around the clock without failure.

Compact, modular and reliable

All products are characterized by a compact construction and a modular structure with upgradeable features. They are reliable and have a broad operational range.

If you require unconventional solutions, we will offer you customer-tailored modifications and further developments.

Our company has been successfully working in the market for over 25 years.

We are a global company built on flexible service, flat hierarchies, good communication and therefore fast reactions in R & D/ final design, production, sales and after sales service.

Quality management according to DIN 9001 is granted.

Our staff are highly motivated and expertly trained. Our customers value the seamless communication, the proactive thinking of our employees and the professionalism and quality of our services.

Germany as a business location offers many advantages, e.g. useful expert knowledge from local research institutions, a reliable supplier network and a local workforce familiar with excellent product quality and reliability.

We are also experienced in your business and ensure that you stay competitive by providing solutions that fit your needs.

Engineered and Made in Germany.

We work together with valve manufacturers, system builders/- planners and end users. We are your specialist for electric and electronic actuators in order to control and regulate product flows through the valve.

At PS Automation, we develop, produce and deliver a broad range of actuators in order to automate valves.

Our core competency is engineering transmissions with electronic control and knowledge relating to applications.

Concentrating on these disciplines, we are able to offer good value for money.

Depending on their needs, our customers benefit from further offers, e.g. trainings and services ranging from commissioning to repairs.
